Sprinkler Systems

If you are going to install a sprinkler system, here are some things to consider.

- Westwood North Water Supply Corporation (WWNWSC) representatives will gladly come and mark the water lines, if you give a few days notice. Normally the lines run down the front of your property. They were originally buried at 3'-5', however the county has come in and dug out some of the ditches, so the line may be as shallow as 1'. It is possible that there are other water lines on your property, so please call and let WWNWSC mark them all.
- WWNWSC does not know the location of the water lines running from the meter to your house. That information would have to be obtained from the builder.
- There are also other utility lines that run through the area. One number that you should call is 1-800-245-4545. This is a Texas One Call System. Not all utilities participate in the program but I believe the local gas company does.
- Be sure that your sprinkler system is equipped with a backflow prevention assembly. This is a state requirement (as well as a WWNWSC requirement) that has been in effect for many years. After the installation is complete, WWNWSC needs to receive a copy of the test certificate. Any reputable installation contractor would be aware of both of these items.
- If you install the sprinkler system yourself, it must still be tested by a certified individual. WWNWSC can provide the names of people who can help you with this.

The copy of the test certificate can be dropped off at the business office, or mailed to:
